TRANSFORMING INTERIORS

With eco-friendly materials fast becoming rising stars in the world of interiors, there are multiple benefits of using architectural films and how they can refurbish existing surfaces. Gone are the days when wrapping was exclusive to vehicles; architectural films have opened up a wealth of design possibilities.

COVER STYL®

TRANSFORM YOUR SPACE TODAY

At Grayers Graphics we offer a range of architectural films designed to realistically recreate the look of natural more expensive materials. Cover Styl' and 3M DiNoc films incorporate hundreds of patterns, all in stock and available by the metre.

- > LIFTS
- > ESCALATORS
- > WINDOW FRAMES

- > COUNTER TOPS
- > WALLS
- > FURNITURE

The flexible films adhere to almost any surface, facilitating a perfect application on any furniture contour or shape. The film is rated A+ on VOC tests (indoor emissions), as well as being UV and fire resistant.

Our extensive range has many finishes, including wood, solid colours, metallic, glitter, fabric, natural stone and leather patterns for decoration and refurbishment.

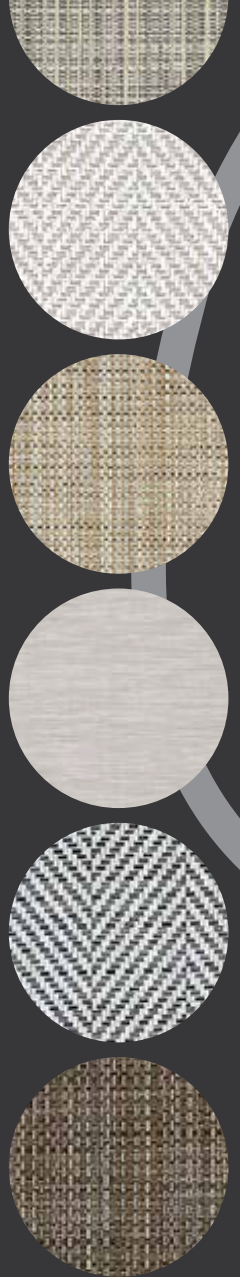

WOOD GRAIN

The new Premium Wood Series expresses the realistic appearance and texture of natural wood. The controlled reflection of the matte coating technology is combined with both fine and deep wood grain embossing and high-quality printing. This unique technology creates the optimum tone and texture of each species of wood

MINIMAL DISRUPTION

Architectural films can be applied in situ, with no noise, mess or waste. Little equipment and minimal prep is needed, meaning less downtime and inconvenience for businesses and they can stay open throughout.

The films are lightweight and conformable so they can be heated and stretched around many shapes, corners and contours without the need for edge banding.

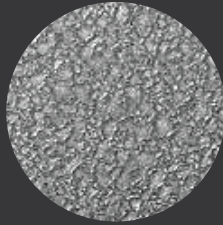

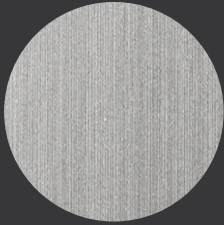

FABRIC

This product, made by a weaving method of weaving PVC yarns one by one into weft and warp yarns, has natural texture and durability unique to fabric.

METAL

Our imitation metal films are a great solution to save cost on refurbishment projects. With realistic steel, copper and iron effects, we have something to suit every application.
